NEIL BURT MARTÍN

Mechatronics Engineer | Robotics & Control Systems

+34 651 93 34 72 • neil.115bm@gmail.com • neilburt5.github.io • linkedin.com/in/NeilBurtMartin

PERSONAL STATEMENT

Mechatronics graduate with hands-on experience in robotics, control systems, and machine learning. Designed PID controllers and flight simulations for autonomous drones, developed reinforcement learning pipelines, and built a domain-specific LLM for embedded systems as a graded thesis (10/10). Completed a research program on safe reinforcement learning for underwater robotics at Shanghai Jiao Tong University. Currently a Project Engineer at Cobra Aeronautics (aircraft engine test benches, PLCs, SCADA). Experienced in international environments, including an exchange semester in Shanghai. Proficient in Python, MATLAB, C/C++, and Simulink. Currently leading control and programming at SDU's Micromouse Robotics Club.

EDUCATION

Bachelor of Engineering in Mechatronics (Diploma Engineer) 2022 – 2026
SDU Syddansk Universitet, Sønderborg, Denmark

Exchange Semester — SSPU Shanghai Second Polytechnic University Sept 2024 – Jan 2025
Coursework: Statistics, Probability, Project Management | Began studying Mandarin (HSK2)

THESIS

Fine-tuning Large Language Models for Specialized Assistance in Embedded Systems Engineering
Grade: 10/10

SDU Syddansk Universitet | Supervisor: Benaoumeur Senouci

- Fine-tuned Mistral 7B using Low-Rank Adaptation (LoRA) with a custom 1,651-sample domain-specific dataset
- Iterated through 9 training cycles to balance overfitting and underfitting; deployed via Ollama in GGUF format
- Evaluated against base model through structured user experiments; fine-tuned model showed consistent improvements in task completion rate, response clarity, and user confidence
- Model published on HuggingFace: huggingface.co/Neilburt/embbeded_assistant

WORK EXPERIENCE

Project Engineer — Cobra Aeronautics October 2026 – Present
- Design and build test benches for aircraft engines, using LabVIEW and PLC programming
- Maintain the SCADA systems of several photovoltaic plants across Spain

Junior Engineer — Ruybesa Global Technologies March 2025 – July 2025
- Supported technical proposals and delivery of tailored engineering solutions in an international environment

RESEARCH EXPERIENCE

Research Program — FINS Laboratory, Shanghai Jiao Tong University July – August 2026
Topic: Safe Reinforcement Learning for Precision Grasping

- Developed a safety layer for the navigation of an autonomous underwater vehicle (AUV) built by the FINS Laboratory at Shanghai Jiao Tong University
- Applied Control Barrier Functions (CBFs) to constrain reinforcement learning policies and guarantee safe navigation behaviour
- Researched safe reinforcement learning methods for precision grasping tasks in underwater robotic manipulation

UNIVERSITY PROJECTS

Drone Control Project 4th Semester, SDU Sønderborg
- Designed, programmed, and simulated a drone capable of stable autonomous hovering
- Modelled the drone's plant system in Simulink and developed a PID controller for stable flight
- Applied control theory and simulation tools to ensure safe and reliable testing

Micromouse Robotics Club — Control & Programming Lead SDU, Sønderborg | Ongoing
- Leading a team of 5 members in the design of control algorithms and software for autonomous maze navigation
- Coordinating development tasks and guiding implementation toward competition-ready performance

AWARDS & COMPETITIONS

HackKosice Hackathon — 1st Place April 2026
AT&T Challenge Winner • Best Use of ElevenLabs Award

- Developed Nabu, a voice-based technology assistant designed for elderly users, in a team of three
- Responsible for ElevenLabs voice API integration, frontend development, and part of the backend authentication
- Stack: Gemini API, ElevenLabs, Digital Ocean

SKILLS

Programming: Python, MATLAB, C/C++, LabVIEW, PLC programming

Software & Tools: LabVIEW, SCADA, Simulink, NX Siemens, ANSYS, Git, Ollama, HuggingFace

Engineering Areas: Control systems, Robotics, Control Barrier Functions (CBF), Safety layers for AUV navigation, Reinforcement learning, Embedded systems, Simulation, Test benches

Languages: Spanish (Native), English (C1), Chinese (HSK2), Danish (Basic)
